Determine the Weight and Size

UPS Express® and Expedited Services

Billable Weight:

Actual or Dimensional?

Determining which weight to use in calculating your rate requires that you determine which rule applies. Different rules apply depending on the service selected.

For UPS Express services, actual weight is the weight of the package rounded up to the next half kilogram. For UPS Expedited, actual weight is the weight of the package rounded up to the next kilogram.

Dimensional weight considers density, which is the amount of space a package occupies in relation to its actual weight.

Billable weight is the weight used to calculate the rate. The billable weight will be the greater of the package's actual or dimensional weight.

Note:

Packages that exceed UPS weight and size limit are not accepted for transportation. Contact our Customer Service Representatives for details.

In instances where the shipment's weight (either actual or dimensional) computed by the UPS billing system is greater than the weight declared by you, the UPS billing system will apply such computed weight as the billable weight to determine the applicable rate for billing purposes.

Irregularly-shaped Packages

Measure boxes or containers that are not rectangular to determine dimensional weight and whether the package is within maximum limits.

Treat the irregularly-shaped package as if it is in a regular rectangular box. Measure the length, width and height of the package from its extreme points.

Step 1

Determine the Actual Weight:

Use a scale to determine the weight of the package. For UPS Express services, increase fractions of a weight to the next half kilogram. For UPS Expedited, increase fractions of a weight to the next kilogram.

Step 2

Determine the Dimensional Weight*:

Calculate the cubic size by multiplying the length by the width and by the height (each rounded up to the next whole centimetre) of each package.

Divide the cubic size of the package by 5,000 to determine the dimensional weight in kilograms. For UPS Express services, increase fractions of a weight to the next half kilogram. For UPS Expedited, increase fractions of a weight to the next kilogram.

Step 3

Select the Proper Zone:

Locate the appropriate zone for the shipment in the zone chart on pages 9 to 12.

$$\left[\begin{array}{c} \text{Dimensional Weight} \\ \text{in Kilograms} \end{array} \right] = \frac{L \times W \times H}{5,000}$$

L = Length in centimetres

W = Width in centimetres

H = Height in centimetres

Step 4

Determine the Shipment Weight:

Rates for multiple-piece shipments**, which include UPS Express Paks and packages shipped to a single receiver on the same day, are based on the total shipment weight of an individual shipment. This means substantial savings over single-piece rates. To determine a shipment's total billable weight, use the greater of each package's actual or dimensional weight. For UPS Express shipments up to 20kg, round the weight to the next half kilogram. For UPS Express shipments over 20kg, round the weight to the next kilogram. For UPS Expedited shipments, round the weight to the next kilogram.

Additional Information: Weight and Size Limits

- Maximum weight per package is 70 kg.
- Maximum length per package is 274 cm.
- Maximum size per package is 400 cm in length and girth [(2 x width) + (2 x height)] combined.
- There is no limit to the total shipment weight or number of packages in a shipment.

Freight Collect Shipment

Some destination countries do not offer Freight Collect service. Contact our Customer Service Representatives for details.

Shipping charges will be reversed to the shipper if the consignee refuses to make payment.

* For import shipments, use the origin country unit of measure and dimensional factor to calculate the dimensional weight.

Dimensional weight applies to all international shipments except shipments using UPS Express Envelope, UPS 10 KG Box® and UPS 25 KG Box®.

** Multiple-piece shipment refers to a shipment consisting of packages and/or documents sent via a single waybill number.

Determine the Weight and Size

UPS Worldwide Express Freight® Services

Billable Weight:

Actual or Dimensional?

Determining which weight to use in calculating your rate requires that you determine which rule applies.

Actual weight is the weight of the items on the pallet and the weight of the pallet rounded up to the next kilogram.

Dimensional weight considers pallet density, which is the amount of space a pallet occupies in relation to its actual weight.

Billable weight is the weight used to calculate the rate. The billable weight will be the greater of pallet's actual or dimensional weight. A minimal rate may apply.

Note:

In instances where the shipment's weight (either actual or dimensional) computed by the UPS billing system is greater than the weight declared by you, the UPS billing system will apply such computed weight as the billable weight to determine the applicable rate for billing purposes.

Step 1

Determine the Actual Weight:

Actual weight is the weight of the items on the pallet and the weight of the pallet rounded up to the next kilogram.

Step 2

Determine the Dimensional Weight*:

Calculate the cubic size by multiplying the length by the width and by the height (each rounded up to the next whole centimetre) of each pallet.

Divide the cubic size of the pallet by 5,000 to determine the dimensional weight in kilograms. Increase fractions of a weight to the next kilogram.

$$\left[\begin{array}{l} \text{Dimensional Weight} \\ \text{in Kilograms} \end{array} \right] = \frac{L \times W \times H}{5,000}$$

L = Length in centimetres

W = Width in centimetres

H = Height in centimetres

Step 3

Determine the Billable Weight:

Compare the pallet's actual weight to the dimensional weight. The greater of the two is the billable weight and should be used to calculate the rate.

For multiple-pallet shipments, add up each pallet's billable weight to determine the shipment billable weight.

Billable Weight Calculation

e.g.: A customer has a shipment of three pallets weighing 50 kg, 400 kg and 300 kg. All pallets are the same size with the following dimensions: 122 cm x 102 cm x 150 cm

1. Determine the Actual Weight

Actual Weight:
50 kg + 400 kg + 300 kg
= 750 kg

2. Determine Dimensional Weight

Pallet Dimensional Weight:
(122 cm x 102 cm x 150 cm) / 5,000
= 373.5 kg

Shipment Dimensional Weight:
373.5 kg + 373.5 kg + 373.5 kg
= 1,120.5 kg

3. Determine Billable Weight

Shipment's Billable Weight:
373.5 kg + 400 kg + 373.5 kg
= 1,147 kg

* For import shipments, use the origin country unit of measure and dimensional factor to calculate the dimensional weight.

For UPS 10 KG Box and UPS 25 KG Box, the shipping charges will be billed to shipper, duty and tax will be billed to receiver. Conditions and restrictions, including the UPS Terms and Conditions of Service, apply. For details, please contact our Customer Service Representatives or refer to ups.com.

* The UPS 10 KG Box is designed to hold a maximum weight of 15 kg. The UPS 25 KG Box is designed to hold a maximum weight of 30 kg. It is not recommended that shipments sent in the respective boxes exceed the maximum weight limits.

[#] In some instances, shipments may be more economically charged if rated at a higher billable weight than the actual billable weight ("Deficit Weight Billing", or "DWB"). The UPS billing system will compute both amounts using the gross shipping rates and take the lower of the two before applying any customised incentives to finalise the charges. DWB is applied by default. If you encounter any billing issues due to DWB and/or wish to opt out of DWB for actual billable weight of the shipment to be charged in all instances, please contact your sales representative.

Note:

Future Changes – Rates, charges, service explanation, services, service availability and zones are subject to change without prior notice.

* The UPS 10 KG Box is designed to hold a maximum weight of 15 kg. The UPS 25 KG Box is designed to hold a maximum weight of 30 kg. It is not recommended that shipments sent in the respective boxes exceed the maximum weight limits.

In some instances, shipments may be more economically charged if rated at a higher billable weight than the actual billable weight ("Deficit Weight Billing", or "DWB"). DWB is applied by default. If you encounter any billing issues due to DWB and/or wish to opt out of DWB for actual billable weight of the shipment to be charged in all instances, please contact your sales representative.

In some instances, shipments may be more economically charged if rated at a higher billable weight than the actual billable weight ("Deficit Weight Billing", or "DWB"). The UPS billing system will compute both amounts using the gross shipping rates and take the lower of the two before applying any customised incentives to finalise the charges. DWB is applied by default. If you encounter any billing issues due to DWB and/or wish to opt out of DWB for actual billable weight of the shipment to be charged in all instances, please contact your sales representative.
